Vpn droid login

Continue

Surfshark is one of the best best VPN services currently available and comes crammed with features, runs almost everywhere, and has one of the best value introductory deals around. The network has 3,200+ servers distributed across an impressive 160+ locations in 95 countries. There are Windows, Mac, iOS, Android and Linux apps, plus Chrome, Firefox and now Edge extensions, and a website unblocking Smart DNS system for games consoles, smart TVs and more. Whatever you're using, there's no need to worry about annoying 'simultaneous connection' limits - you can install and run Surfshark on as many devices as you like. The service is excellent on the technical essentials, including strong AES-256-GCM encryption, WireGuard, OpenVPN and IKEv2 support, a no logs policy, and a kill switch to protect you if the VPN connection drops. Want to try Surfshark? Check out the website here (opens in new tab)There's real depth here. Android apps can see through most VPNs by requesting your physical location, but not Surfshark - a GPS Spoofing feature enables it to return the coordinates of your chosen VPN servers, VPN chaining (use two servers, VPN chaining (use two servers, VPN chaining (use two servers, and 24/7 support on most servers, and 24/7 support on most servers), split tunneling, the company's own zero-knowledge DNS servers, and 24/7 support on most servers). our last review include a lighter, more practical Windows kill switch (we'll look at that later). There's finally a browser extension for Edge, as mentioned, and WireGuard is now the default app protocol. The company has also announced Surfshark Nexus, which it calls 'a cutting-edge technology to change VPNs.' Check this blog post (opens in new tab) for the details, but essentially it provides a smarter way of routing your traffic through Surfshark's network. Surfshark Nexus will deliver new features throughout 2022 and 2023, but the first is already here: IP Rotator automatically changes your IP address every few minutes, without you having to disconnect. The Surfshark One plan includes data breach alerts and a privacy-friendly internet search (Image credit: Surfshark)Surfshark VPN: what's new?Editor's note: Since our latest full test of Surfshark in March 2022; Even more locations have been made to the service:- July 2022: Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the service:- July 2022; Even more locations have been made to the ser 2022: GUI updated (opens in new tab) for Linux users.- May 2022: Eight new server locations added to the network in Brunei, Bhutan, Sri Lanka, Bangladesh, Cambodia, Mongolia, Nepal and Laos. - May 2022: Surfshark Antivirus (available through the Surfshark One suite) rolled out to macOS users. Surfshark pricingAs you'll see courtesy of our dedicated Surfshark price and deals guide, the service's monthly plan (opens in new tab) is more expensive than some at \$12.95.Paying for a year upfront (opens in new tab) offers the best value at \$2.49 a month. Or to talk totals: signing up for one year costs an up-front \$47.88, but two years is only marginally more expensive at \$59.76. But again, this is only for the first term; on renewal you switch to the regular \$4.98 a month annual plan. That initial price beats most of the competition, but there are a few exceptions. Private Internet Access' three-year plan is priced at only \$2.03 a month for the first term, for instance, and has a simple on-demand antivirus, data breach monitoring and privacy-friendly internet search. You can activate it for an extra \$1.99 a month. Cheap? Well, it's a very basic setup. The antivirus app.Surfshark One also gives you an Avira-powered antivirus, but it's a basic affair (Image credit: Surfshark)If security is a priority, keep in mind that most top antivirus companies now also include VPNs. Avast One gives you far more capable antivirus and security tools, and an unlimited VPN, for \$4.19 a month in year one, \$8.33 on renewal.Surfshark's 7-day free trial for Android, iOS and Mac gives you some time to sample the service for yourself. We'd like something for Windows users, too, but it seems unfair to complain when many providers have no trials at all.Surfshark even delivers more than you'd expect with its range of payment methods, with support for credit cards, PayPal, cryptocurrencies, Amazon Pay and Google Pay.But if, after all this, you sign up and find the company isn't for you, no problem - you're protected by a 30-day money-back guarantee.Surfshark keeps no logs on its users and the service protects your connection with AES-256 encryption and a kill switch (Image credit: Surfshark)Privacy and loggingSurfshark)Privacy and loggingSurfshark)Privacy features start with the VPN basics: secure protocols (WireGuard, OpenVPN UDP and TCP), AES-256 encryption, and a kill switch to block internet access and prevent identity of the term of term of the term of leaks if the VPN connection ever fails.Surfshark's network has its own private DNS on each server to reduce the chance of others spying on your activities. And the ability to use a double VPN hop (connect to Paris, say, then leave the Surfshark network in New York) makes it even more difficult for anyone to follow your tracks.Like ExpressVPN, Surfshark is based in the British Virgin Islands, and the company points out that this means it's not required to keep logs of user actions. Surfshark's No Logs page (opens in new tab) says the service doesn't collect your 'IP address, browsing history, used bandwidth, session information, network traffic or connection timestamps.'The only data the company keeps about you is your email address and billing information, the Surfshark FAQ (opens in new tab) explains. Surfshark vodes on trust. And that's why we're happy to see that Surfshark has put two areas of its service through an independent security audit. In November 2018, the Germany security microscope. The company only found a couple of small issues, and concluded that it was 'highly satisfied to see such a strong security posture on the Surfshark VPN extensions. 'That was good news in 2018, but it's less interesting years later, especially when it only examined such a limited area of the service. In May 2021 Surfshark went further, though, reporting on a second Cure53 audit (opens in new tab) of its servers. This audit had a much wider scope: 'To thoroughly examine and evaluate the security posture exposed by the Surfshark server, VPN configuration, as well as the related infrastructure.'The auditors found only four security-related general issues, with a maximum severity of 'Medium.' If you're not used to reading Cure53 audits, that's not bad at all (they're exceptionally thorough and always find something). The report concluded 'the overall outcome should be regarded as good' and Surfshark had a clear understanding of the challenges presented by VPN security. Surfshark had a clear understanding of the challenges presented by VPN security. And the company has only published a summary of the report; we'd much prefer to see the full version. Still, we're glad to see Surfshark underwent this audit, and the conclusions look good to us. The company tells us there's another audit being planned imminently, and we'll be interested to see the results. Surfshark's Windows client will be easily recognizable to those familiar with other VPNs (Image credit: Surfshark)Windows appSurfshark's Windows app is easy to install, and reasonably simple to operate. The interface is a little more complex than usual - sporting tabs, icons, lists, and more - but the basic features work much like any other VPN. There's a Connect button to access your nearest server, a location list showing other servers, plus a Settings icon which leads to some useful extras. WireGuard connections are quick, and happen in just a couple of seconds, with OpenVPN taking a more mid-range 8-10 seconds. But the app keeps you informed, with desktop notifications letting you know exactly when you're protected (and when you're not). The well-designed location picker displays countries and cities in the same list. That makes for a little more scrolling, but it also means you don't have to browse cities in another tab: they're all visible at a glance. Surfshark spoils the effect a little more scrolling, but it also means you don't have to browse cities in another tab: they're all visible at a glance. have latencies by default, but you can check them with a click. A Search box allows you to find specific locations with a few keypresses (typing 'atl' is enough to display Atlanta), and there's a Favorites system to save your top locations for later. A Static IP list enables connecting to locations with a few keypresses (typing 'atl' is enough to display Atlanta), and there's a Favorites system to save your top locations for later. been dropped since our last review), and receiving a fixed IP from each one (that is, your IP will be from the country you choose, but it'll be the same every time you connect). That could be handy in some situations, but beware if you use it for security - perhaps to get access to an IP-restricted network. This is a static IP, but it's not a dedicated IP, just for you; any other Surfshark customer can be allocated the same IP address, so the IP alone isn't a guarantee of your identity. Surfshark even includes a MultiHop feature that sends your traffic through two VPN servers, ensuring that even if the exit server is compromised, an attacker still won't have your real IP. There are 14 routes available, where the first server is your initial connection (options include US, Canada, UK, Singapore, Germany, Hong Kong, India, Netherlands and Australia), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands and Australia), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands and Australia), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands and Australia), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands and Australia), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands and Australia), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands and Australia), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands and Australia), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands), and the second is where you'll appear to be to the outside world (France, Germany, Hong Kong, India, Netherlands), and the second (France, Germany, Hong Kong, India, Netherlands), and the second (France, Germany, Hong Kong, India, Netherlands), and the second (France, Germany, Hong Kong, India, Netherlands), and the Netherlands, Portugal, Singapore, Sweden, UK, US). A Bypasser panel enables specifying applications, websites and IP addresses that bypass the VPN (an expanded version of the split tunneling feature you'll see with providers like ExpressVPN). If using Surfshark causes issues with a particular website or app, adding it to the allow list should solve the problem. Alternatively, you're able to set the Bypasser to route only your chosen apps through the VPN. That may be more useful if you're only using Surfshark for one or two tasks, for example torrent client to connect via the VPN and everything else will use your regular connection. There are plenty of configuration options, and they all worked well for us, plus it's great to see a VPN provider deliver this level of split tunneling support on the desktop. (Many VPNs have split tunneling-type systems on Windows - ExpressVPN, Hotspot Shield, NordVPN, Private Internet Access, ProtonVPN - but many save the feature for their mobile apps). Surfshark's CleanWeb feature blocks ads, trackers and malicious links. We're unsure how effective this might be, though, as in our quick tests we found specialist tools like uBlock Origin blocked more ads and offered more ads and offered more ads, but presumably it tries to obfuscate your traffic in some way. More conventional features include options to launch the VPN along with Windows, or switch the protocol to WireGuard, OpenVPN UDP and TCP, or IKEv2. (Surfshark used to support Shadowsocks, commonly used as a way to bypass internet censorship in China and other VPN-unfriendly countries. Unfortunately, the company dropped the option in November 2021, stating that less than 0.5% of its customers used the feature, and resources would be better invested elsewhere.)You can enable Surfshark's kill switch from the settings menu (Image credit: Surfshark)Surfshark kill switch is on hand to block your internet connection if the VPN drops. It works, too, but with some issues in a few rare situations. One recent change has been applied to make the kill switch, you couldn't access the internet at all, ever, unless you connected to Surfshark. Now, although it protects you in an internet session, it's not active after you disconnect. You can still use your regular internet connected to Surfshark all the time isn't something most users need. If it's something you wanted, the more lightweight kill switch will be a problem, but Surfshark says it's restoring a fully locked-down version soon. The kill switch handled our main tests well. However we closed the VPN connection, the app displayed a notification to warn us, our internet was blocked, and our traffic was never exposed. We also run more extreme tests, though, for example to see what happens if Surfshark's apps or services crash. In the worst case, this broke the app to the point that we could no longer access any websites with the kill switch turned on. Even rebooting didn't help. The software appeared to realize there was an issue, and displayed the message 'We've detected an issue with your connection' in the app window. That's helpful, but we'd have preferred a notification so we were informed about the problem immediately. Our more extreme kill switch is, but they're not a situation you're likely to see in real life. You might use Surfshark for years without ever seeing a service failure. Overall, Surfshark's kill switch is effective and will protect you from all the issues you're likely to encounter. But it's not guite as robust as some of the competition, and we think there's room for improvement. Surfshark's Mac app looks like the Windows version, but there are some differences (Image credit: Surfshark)Mac appSurfshark's Mac app looks much like the Windows version, but with a few small differences. The Favorites tab has disappeared, and the servers now appear at the top of the Location list; that means they're all visible in the same tab, but it might take a little more scrolling to reach some locations.But the app does fix one of our small Windows app annoyances, sensibly displaying city locations in alphabetical order.We didn't drop at any point.Mac users miss out on one or two Surfshark features. In particular, there's no Bypasser to enable choosing any apps or websites you don't want to pass through the VPN. There's still plenty of functionality here, though: static IPs, Multi-Hop VPN, WireGuard and OpenVPN support, the kill switch, CleanWeb's ad and malware blocking, and auto-connect to switch on the VPN. isn't something that Windows users get, by the way). That's a much better spec than we often see elsewhere, and on balance, Surfshark's Android app (Image credit: Surfshark). Mobile apps Mobile VPN apps can be far more basic than their desktop cousins, but Surfshark's Android version is surprisingly similar. Sure, it rearranges the interface a little to work better on smaller screens, but otherwise it has the same protocol support, kill switch, static IP, Multi-Hop and other features that we saw on the desktop. The Android app outperforms the desktop editions in some areas, as it includes both the 'auto-connect on accessing untrusted networks' feature (not available on Windows), and the split tunneling Bypasser system (not available on Mac). You get a couple of new mobile-specific features, one of which is an 'Override GPS location' to match your device's GPS location with your connected VPN server, making it more difficult for apps to see where you really are. And a 'use small packets' option may improve performance with some mobile networks. If any of this doesn't work as it should, you can send bug reports, and raise (or browse) tickets from within the app also shares a similar look and feel to its desktop counterpart (Image credit: Surfshark)It's much the same story with Surfshark's iOS VPN app: the look and feel are very similar, and you still get the kill switch, the choice of protocols (OpenVPN, IKEv2, WireGuard) and more.Small but welcome recent additions include widgets to simplify getting connected. and the ability to report bugs from within the app.It's a surprisingly capable setup, as software for Apple's mobile OS is often short-changed for features in comparison to other platforms. Put it all together and these are impressive apps, well implemented, straightforward to use, and a refreshing change for anyone tired of losing VPN functionality on mobile devices. We used several different speed testing services to determine Surfshark's performance (Image credit: Speedtest.net)Performance with a 1Gbps connection, giving us plenty of scope to see just what the service could do. We installed the latest Surfshark app on our test systems, connected to our nearest location, and checked download speeds using performance testing sites including SpeedTest (the website and command line app), nPerf and SpeedOfMe. We collected at least five results from each site using WireGuard, repeated each test again with OpenVPN, and ran the full test set in both morning and evening sessions.OpenVPN results were disappointing, peaking at around 140-150Mbps in both the US and UK. Most top VPNs reached somewhere in the 200-300Mbps.Surfshark has a secret weapon in its WireGuard support, though, and switching protocols saw downloads jump to 550-700Mbps in the UK, and an excellent 720-790Mbps), although still a little behind our speed leader TorGuard (which hit 950Mbps), and Mullvad (740-820Mbps), although still a little behind our speed leader torGuard (which hit 950Mbps), and Mullvad (740-820Mbps), and with (Image credit: Netflix)Netflix and streamingIf you're tired of VPNs which vaguely hint about their unblocking abilities, but never make any real commitment, you'll love Surfshark. Not only does the company say upfront that it unblocks Netflix, but it also names the near 20 countries (opens in new tab) where it currently works (US, France, Japan, Italy, Australia and more). This wasn't just overblown marketing-oriented confidence, either. We were able to access US Netflix from each of our three test locations. The good news kept coming, too, with Surfshark getting us into both US Amazon Prime and Disney Plus, giving it a perfect 100% in our unblocking VPNs. At the moment, that includes CyberGhost, ExpressVPN, Hotspot Shield, NordVPN and ProtonVPN, all of which have got us into every one of our test streaming sites. Support guides even include tutorials on how to set up Surfshark on Chromebooks (Image credit: Surfshark) Support for you, the support guides, FAQs and other resources to point you in the right direction. The content is well-organized. Clicking 'Get Started' takes you to a Tutorials page with articles on setting up the apps, getting the service working on other platforms and using its various features. These aren't the horribly basic 'download and run the installer' guides you'll get from lesser VPNs, either. Take a look at this example on How To Set Up Surfshark on Windows (opens in new tab) (no need to read it, just scroll down). There's a video guide, step-by-step installation advice with screenshots, plus first steps guidance on choosing locations and getting connected, and basic explanations of all the main features. If this isn't enough, Surfshark's support is available 24/7 via live chat. We tried this while attempting to diagnose a connection issue, and had a friendly reply in under 60 seconds. So, if you're struggling to find something on the website, it might be worth opening a chat session - the problem could be sorted out quicker than you might think. Surfshark review: Final verdictOpenVPN speeds aren't the best, but Surfshark excels just about everywhere else, providing an array of advanced features for (initially) a very low price. An absolute must for your VPN shortlist.
